

DAC-203

White Triple Coat Rust Inhibitor/Neutralizer/White Color Indicator

Performance Characteristics:

- Rust inhibitor
- Acid vapor neutralizer
- White color indicator
- Seals against moisture
- Superior film strength
- Easy removal with degreaser

Description:

White Triple Coat is the choice for use as a neutralizing rust inhibitor when you are dealing with acidic gases and you want to be able to visually see where you have sprayed. We have a white color indicator mixed into the formula.

White Triple Coat will not cross contaminate with your lubricants, so it will not bleed or create witness marks.

Removal Specifications:

Because of the color indicator, you will need to remove White Triple Coat with one of our degreasers rather than letting it mold off.
